

Artem Tutov, Software Developer

E-mail: tutov.artem.t@gmail.com

Phone: +420 723 089 486

Address: Ústí nad Labem, Czech Republic

GitHub: github.com/noilq

LinkedIn: linkedin.com/in/tutov-artem

Summary

Backend developer with hands-on experience in data center operations and infrastructure, working in teams ranging from 2 to 10 members, both remotely and on-site.

I specialize in building scalable APIs (FastAPI, Express, NestJS) and process automation.

I have experience with the full cycle of development: from gathering product requirements to setting up CI/CD pipelines (Docker, Jenkins). Proficient in SQL and data analysis tools (Pandas, Numpy).

Seeking a full/part time or Internship opportunity to learn more and apply my skills in building real-world solutions.

Skills

Languages: Python, JavaScript, C#, SQL

Frameworks: FastAPI, Express, NestJS

Databases & Data Analysis: PostgreSQL, SQLite, Supabase, Redis

DevOps: Docker, Docker Compose, Jenkins, Git, GitHub/Lab

AI & Automation: n8n, Selenium, AI Integration

AI tools: Claude, Gemini, GitHub Copilot, Cursor

Other: Unit testing, Integration testing, Postman, Linux, JSON, XML, YAML

Experience

Software Engineering Intern | Data Center Ústeckého kraje | Ústí nad Labem, Czech Republic

March 2024 - August 2024, Automation & Team Leadership

Led a team of 2-5 student developers to deliver internal automation tools

Built an IoT data collection and analysis system across the region

Designed and implemented scripts for automated software generation and deployment

Stack: Python, Pandas, NumPy, Matplotlib, Docker, MySQL, Git

March 2025 - August 2025, Automation, AI & Data Engineering

Developed a system for AI-generated image detection and real-time facial recognition

Implemented image preprocessing pipelines using python

Worked on adapting models for low-latency performance to support real-time monitoring

Stack: Python, Pandas, TensorFlow, ML, GoogleColab, Kaggle

Projects

Api Generator

Developed an application that automates initial backend API implementation by generating a ready-to-run API from SQL DDL schemas.

Implemented automated code generation logics using Jinja2.

Implemented scalable template system with the option to add new tech stacks by language, framework, ORM and features such as including auth or docker setup.

Application is divided into microservices that communicate through FastApi interface using DTO.

Stack: Python, FastApi/Jinja2, SQL, Docker, Docker Compose

Git: github.com/noilq/ApiGenerator

Time Insight

Developed a Windows desktop application that monitors usage of different applications in the background.

Made a data collection engine and a storage system using SQLite for activity logs.

Created an interactive screens using Plotly graphs to help visualize collected data through various graph types.

Stack: Python, PyQt5, SQLite, Plotly, Pandas

Git: github.com/noilq/TimeInsight

Klotski Visualizer

Built an application that visualizes game tree of the Klotski puzzle game using a 3D force-directed graph.

Implemented BFS algorithm that calculates all possible moves from a given starting board configuration.

Implemented force-directed graph in Unity.

Added UX tools to configure Klotski board, change physical properties of graph and view the state of each node in graph.

Stack: Unity, C#

Git: github.com/noilq/Klotski-visualizer

Education & Certifications

Secondary Education | SPSUL, Czech Republic, 2022 - 2026

Software Engineering, Data Communication Networks

Cisco Certified Professional Training:

CCNA: Enterprise Networking, Security and Automation

Linux Essentials & IT Essentials

Languages

Ukrainian - native

Russian - native

English - Upper Intermediate

Czech - Conversational
